

Natural elegance and
durability of stone

Genuine ASTM S-1 Slate

Breakthrough patented installation system

Lightweight: less than 6 lbs./sq.ft.

A new and affordable way to put the world's finest roof on your home...

Natural elegance. Real slate!

The SlateTec™ Slate roof system uses genuine S-1 premium slate for the equivalent cost of a synthetic or imitation slate. The value of a quality slate roof is well known. The SlateTec slate roof is a patented system that is unmatched in value to cover what is often a family's most important investment.

Lightweight — no structural enhancements

SlateTec installs at under six pounds per square foot. There is no need for enhanced structural support in new construction or for upgrading a re-roof project such as cedar shake replacement. The key is SlateTec's signature interlayer/weather barrier. It allows a genuine slate roof to be installed on almost any re-roofing project.

Traditional slate roof aesthetics

Our patented slate roof system offers "traditional" slate roof aesthetics — better than any other roofing product on the market, either real or simulated. With SlateTec there is no compromise! SlateTec uses only genuine S-1 grade premium slate. Further, our design team can accommodate any custom or standard roofing project and can help you choose from the many colors and textures to build the perfect roof for your home.

SlateTec is designed to be installed on replacement or new construction projects:

1/4" - 3/8" Slate weight under 6 lbs per sq ft.

3/8" - 1/2" Slate weight under 9 lbs per sq ft.

The SlateTec interlayer is designed to protect against weather and UV deterioration for up

to 100 years. This simple combination of SlateTec interlayer and natural slate is easy to install, lightweight, and cost effective. *Natural elegance at an affordable price is the end result.*

SlateTec can be installed in standard 8" exposure straight application 1/4" or 3/8" — or it can be installed with a stagger for a more rustic "old-world" appearance. *The options for color and application are endless.*

Colors

You can choose natural slate colors from around the world. Call us for a complete list. We also carry all colors of Greenstone® Vermont Architectural Slate, as shown below.

GREENSTONE SLATE®
Vermont Architectural Roofing Slate

Test Results and Certifications

Hail Impact: FM 4473: Passed

1/4" - 3/8" Thick Slate (Class 3) (Under 6 lbs per sq ft)

3/8" - 1/2" Thick Slate (Class 4) (Under 9 lbs per sq ft)
